# GEUTEBRÜCK

Activation of scan data processing
G-Core/ScanConnect

The option enables scan data including the assigned location information to be processed in G-Core systems. The data is transfered to the system via the interfaces and can provide the respective images to the scan data and recording location to the user in real time.

- Logistics warehouse.
- Cash desks.
- Dispatch stations.
- Production halls

- Easy integration of standard barcode scanners via various interfaces.

- Fixed or dynamic linking of location data with the scanned data.

- Automatic control of the video recording with linked metadata (barcodes, tracking numbers, etc.) in real time.

- Complex event control with preconfigured camera mappings and corresponding recording modes.

- Comfortable filter dialog for accelerated search and playback of the corresponding video recording in G-View.

- Supports search for partial strings.

Technical data

G-Core/ScanConnect

G-Core option for the processing of scanned data (barcodes, tracking numbers, etc.) with location information for the event control for all G-Scope systems.

Order No. 8.34040
