

## Extension of the G-SIM software upgrade plan G-SIM/Upgrade

■ The G-SIM/ Upgrade contains the right to a further major release of the software, which usually contains significant changes or innovations, as well as the right to corresponding minor releases and patch levels. A major release is released every 12 months.

With the software option G-SIM/Upgrade, you buy the extension of the right to software upgrades for another year after the official termination of the Software Upgrade Plan period of your G-SIM installation. The cost of this upgrade is calculated based on the size of your system and is 20% of the total system cost. The system costs consist of the price of the G-SIM software and the additional G-SIM/FailoverCam options in your system.
